RALKOM

R-Sessions

All your servers in one window.

No cloud, no subscription, on Windows and Linux.

SSH · SFTP · Tunnels · Serial · Telnet · VNC

Free edition · Pro €35

Encrypted vault

Passwords and keys stay on your computer. No account, no cloud.

Pay once

A perpetual license, with no subscription and no online activation.

Windows and Linux

The same features on both systems, with in-app updates.

RALKOM

Built around what annoys admins

R-Sessions is a connection manager for administrators and IT teams. Here are five things users of similar tools complain about most, and how R-Sessions handles them.

“My passwords and server list live in another company's cloud.”

Nothing leaves your computer.

No account and no cloud. Hosts, passwords and keys are encrypted locally with your password (Argon2id, XChaCha20-Poly1305). The program sends no usage statistics and no data about you.

“Yet another subscription.”

You pay once.

A Pro license costs €35, one time, and never expires. New features for 12 months are included.

“PuTTY, WinSCP, a VNC viewer, a COM port terminal… five windows at once.”

One window with tabs.

SSH terminal, two-pane SFTP files, tunnels, serial port, Telnet and VNC desktop. Split panes, `Ctrl+K` search and connection history.

“On Linux I use different tools than on Windows.”

The same program on both systems.

The same features on Windows 10/11 and Linux (deb, rpm, AppImage), with digitally signed automatic updates.

“Moving all my connections will take an afternoon.”

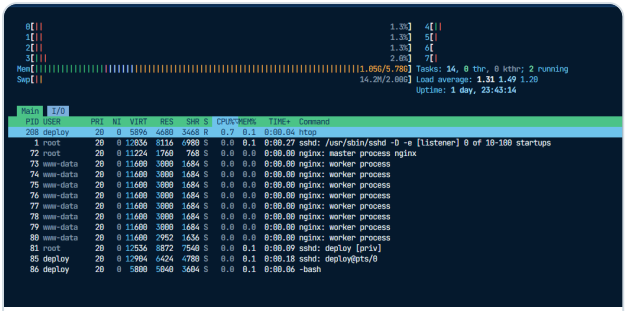

Import in minutes.

Hosts from PuTTY and `~/.ssh/config`, jump hosts included. Move your whole setup to another computer in one encrypted file.

RALKOM

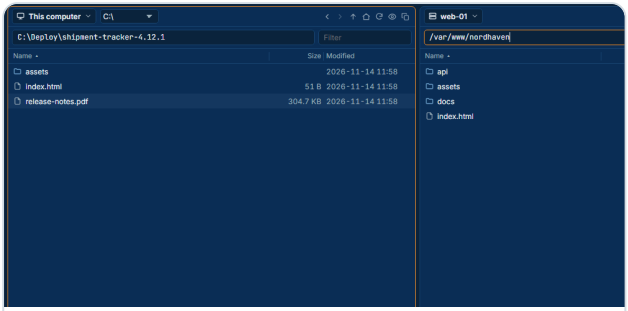

What R-Sessions does

Everything an admin needs every day, in one consistent program.

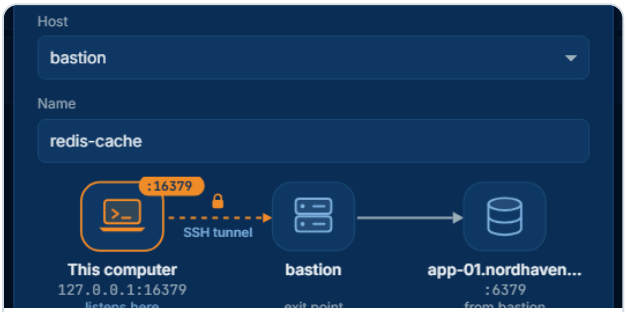

SSH terminal

Tabs and split panes, keys and SSH agent, server key verification, a server load bar.

SFTP files

Two panes, a transfer queue, resuming interrupted files, Root mode through sudo.

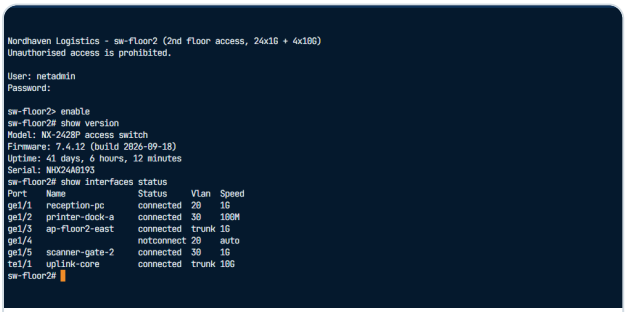

Tunnels

Local, Remote and SOCKS with a clear diagram. Started by hand or together with the host.

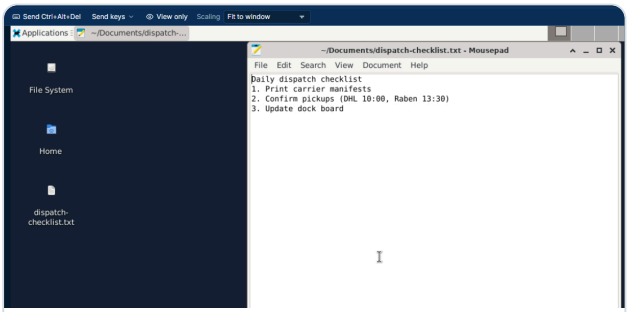

Jump hosts

Servers behind a bastion one click away, with key verification at every hop.

Serial and Telnet

Consoles of switches, routers and UPS units next to your servers, with unencrypted connections clearly marked.

VNC

A remote computer's desktop in a program tab, also through an SSH tunnel.

RALKOM

Start for free

The Free edition has every feature. Pro removes the limits on saved hosts and tunnels.

	Free	Pro
All protocols and features	yes	yes
Saved hosts	up to 15	unlimited
Saved tunnels	up to 2	unlimited
Quick connect	unlimited	unlimited
Fixes and security updates	yes	yes
Price	€0	**€35** one time

- **The license is a file** you load in the program's settings. No online activation, no account.
- **One license is one person** on any number of their computers, Windows and Linux.
- **The license never expires.** New features for 12 months are included; after that the program keeps working with no limits.
- **Nothing is lost.** The program never deletes or locks data because of the license.
